Page 3/3

### **Basement:**

A basement compartment with its own socket and light source has been allocated to each apartment.

### **Future-proof and sustainable:**

„HÖFE“ is equipped with multiple photovoltaic systems. A large portion of the energy produced is stored in the form of warm and hot water by means of energy management. This energy is available to the residents, whether for showering or for heating.

Power consumption is considered separately for each apartment. Even in this case, residents benefit from clean power, which is also reported and billed separately. The exact consumption is indicated on the power bill. As a result, tenants can check and adjust their personal ecological foot.

So-called pooling for own consumption has been established so that all these benefits are possible. Thanks to pooling for own consumption, the photovoltaic power can be consumed more affordably compared to local network suppliers.

### **Registration procedure:**

The application occurs online directly via the project website [www.hoefe-adliswil.ch](http://www.hoefe-adliswil.ch). The current debt collection statements (no older than 6 months) and a copy of ID (for aliens, also a copy of the alien's identity card) can be loaded directly to the application tool.

Minor changes are reserved. The lease documents and the relevant enclosures represent initial information and do not constitute an offer. The documents are not part of the lease agreement to be concluded later.
